This add-on gives the possibility to print the issues as cards with beautiful layouts

➤ Description

Print your **filters and issues** with a single click, with a configurable and beautiful layout.

Show a large **QR code** in each card to quickly locate your tickets.

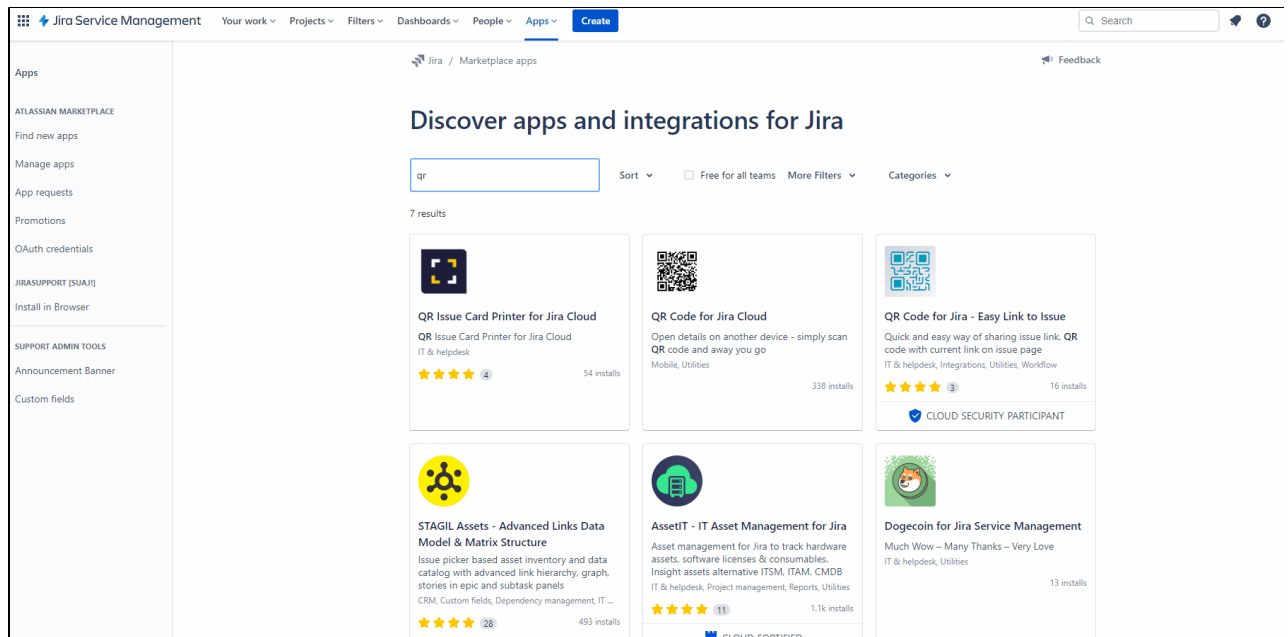

Now you can also print from your **Kanban or Scrum board and from your backlog view!**

New features coming soon!

Video Summary

➤ Step 1: Install add-on in your Jira Cloud instance (by a Jira Admin)

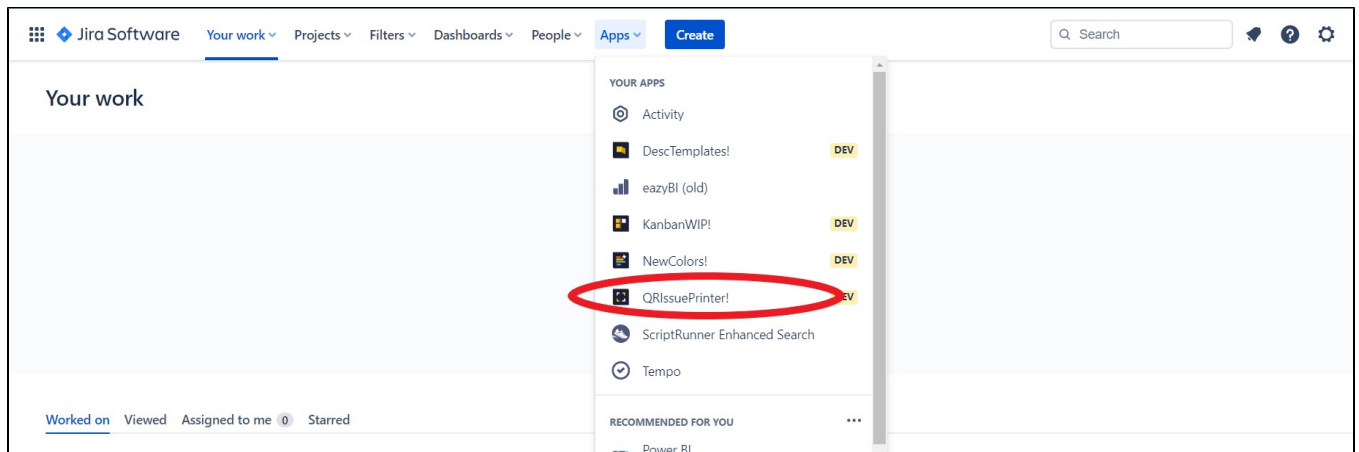

Follow the classic way to install using the **Find new apps**, as shown below

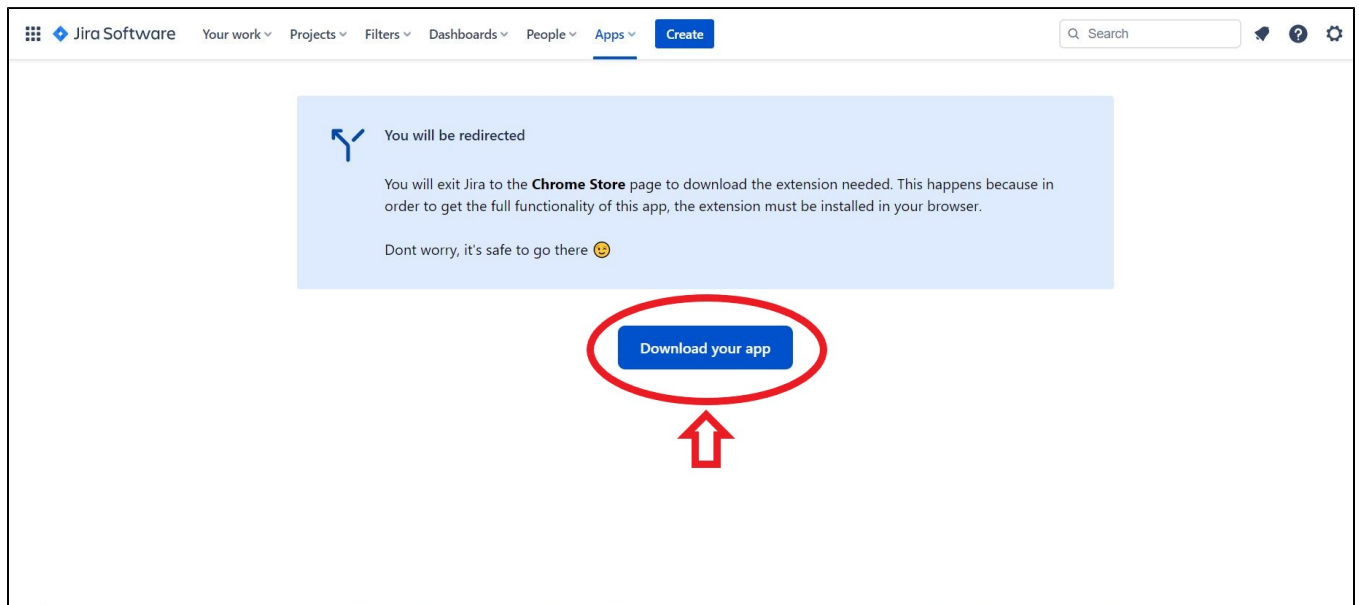

That's all Jira Admin! Now is turn of the users!

➤ Step 2: Install add-on in your favorite browser! (by the Users)

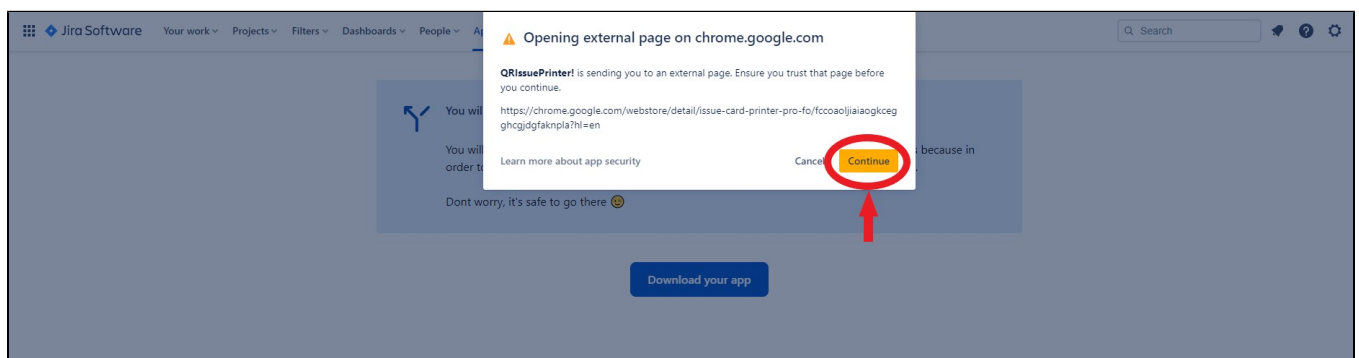

Go to **Apps QRIssuePrinter!** and install the add-on in your favorite browser

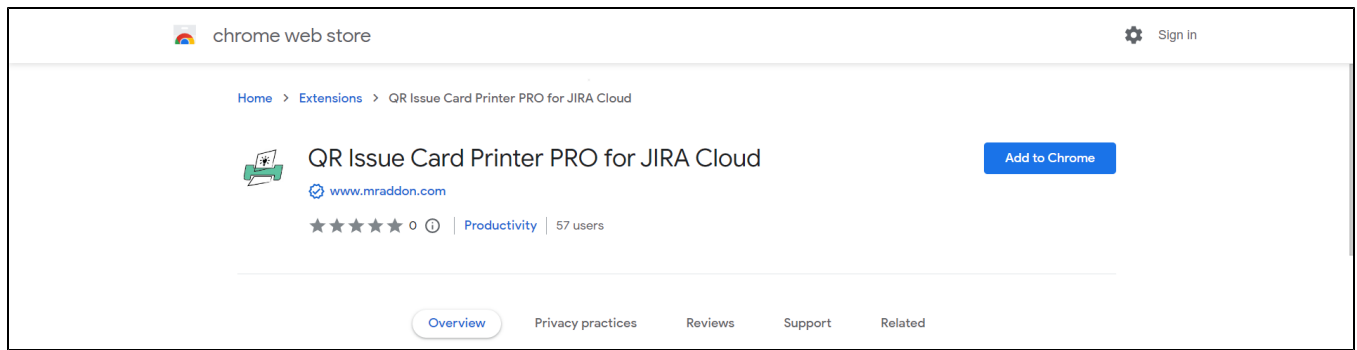

A page will open where you must click the **"Download your app"** button

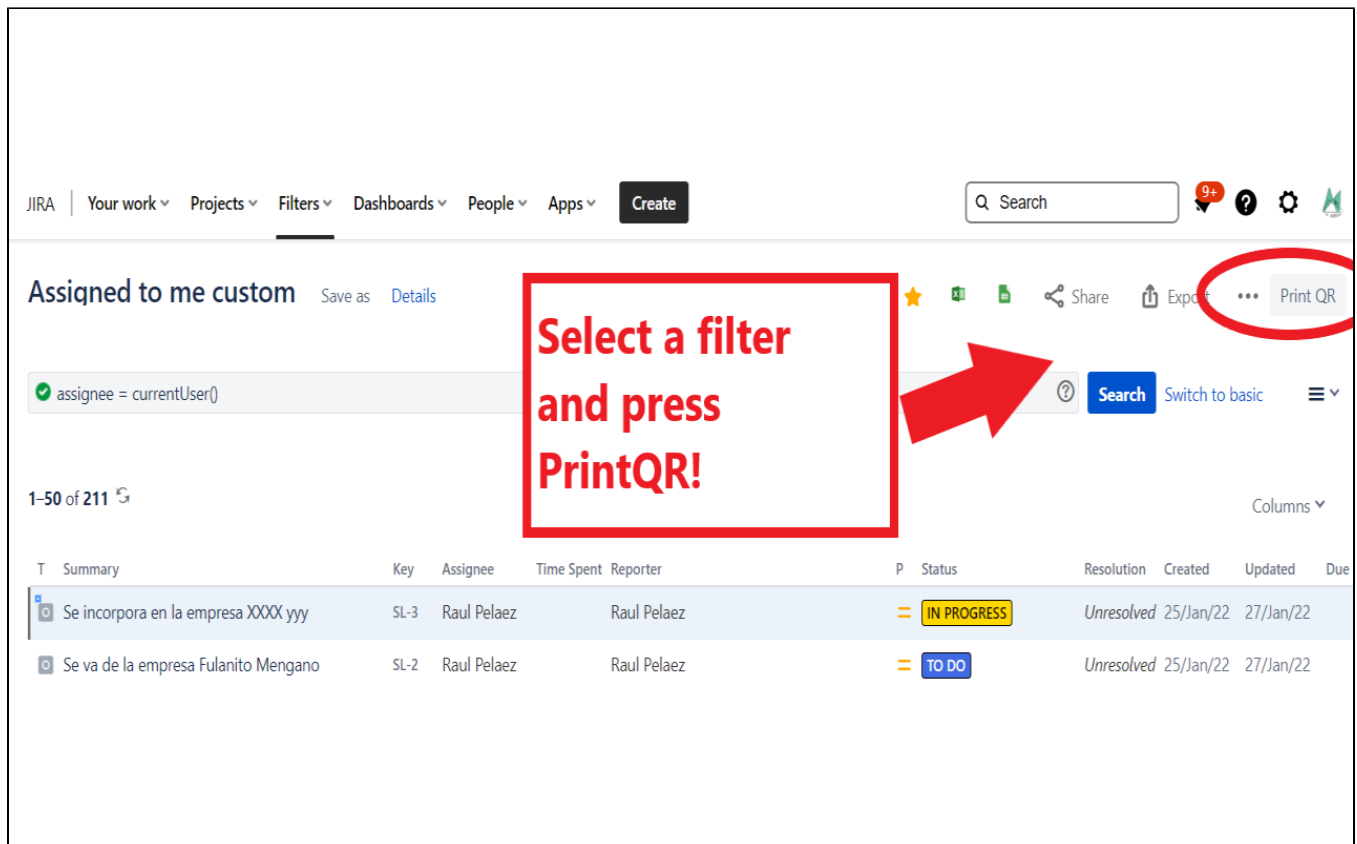

A new window will appear to warn that it is an external link. **Click on continue**

Directs you to the browser's web store. **Add the plugin to the browser**

That's all! Now take a look in your *Issues, Filters and Kanban/SCRUM boards and backlogs* and you will see a new button **"Print QR"**

After press the **"Print QR"** button you will see a beautiful cards ready to print in one click!!

Issue with Status Colors PRO for Jira Cloud

Hello,

We have Status Colors PRO for Jira Cloud and recently migrated a Jira Service Desk project from Jira Server to Cloud, and Status Colors stopped working. We verified the colors' setup in the workflow status, re-entered them, and saved the workflow – but it still doesn't work. We also added Chrome extension into MS Edge but no luck.

Any idea what else to try in order to get Status Colors working in the Cloud? We found it useful in Jira Server projects.

S R R R R

2 x 2 Grid Zoom -0.5 1xPage Desc Report Assign DueDate Points Component Label QR Print

Now we can configure show/hide the system fields of Jira, we have a Zoom control and grid control, also of course, the QR code.

In the header part we can see some buttons:

- **Header:** to change the title of the cards
- **CF1, CF2, CF3:** To see some customfield value (usually single line text field, numeric field, or date field)

Once configured, push “Print” button!

The screenshot shows the Jira issue card printer interface. On the left is a sidebar with filters and search options. The main area displays a grid of issue cards. A red box highlights a specific card with the text "Use the Standard Print controls!". To the right, a print settings sidebar is open, showing options for destination, pages, design, and margins. A red arrow points from the highlighted card to the print settings sidebar.

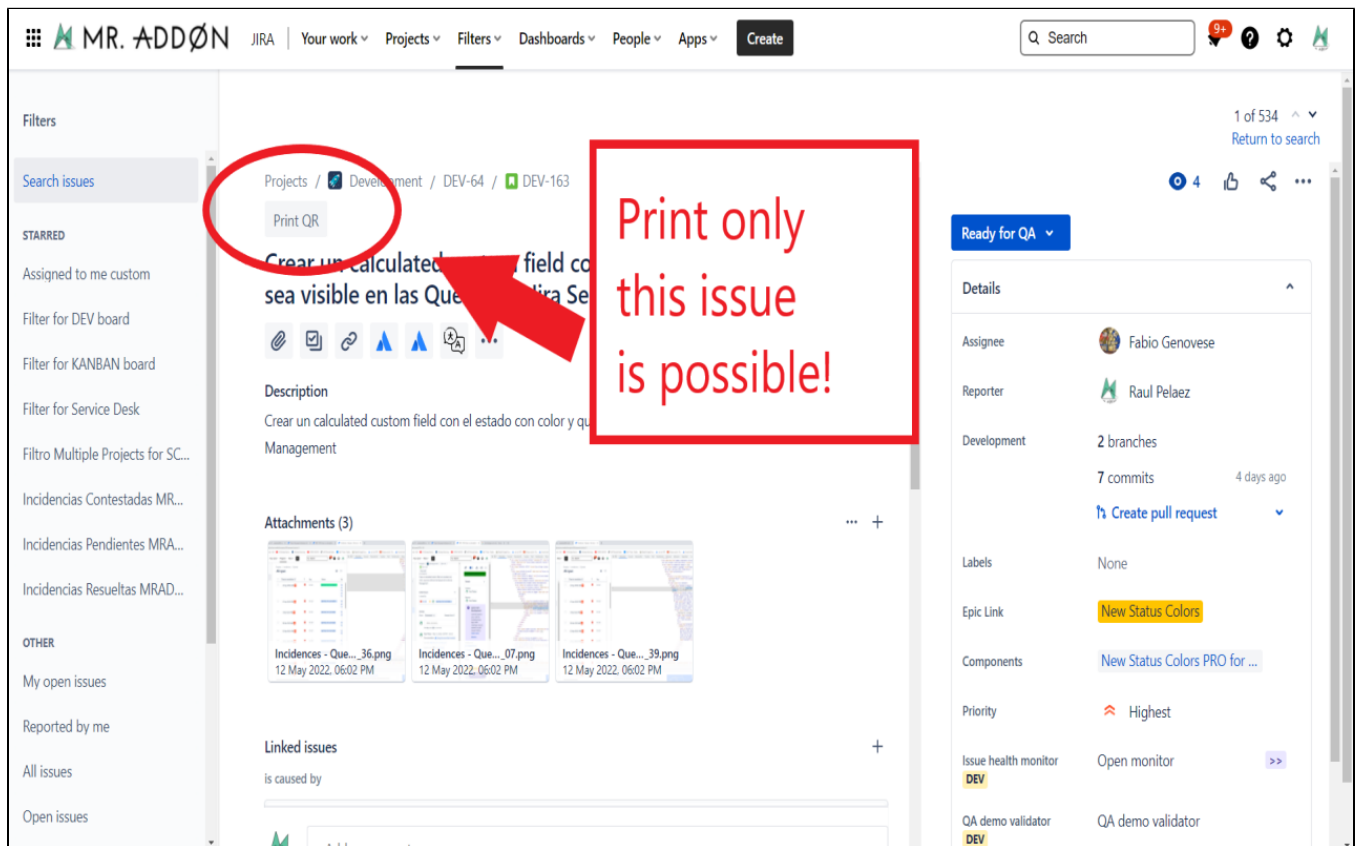

Use the Standard Print controls!

Just configure the final part, page margins and Save it as PDF or just print in your usual printer!

The screenshot shows the Jira issue card printer interface. On the left is a sidebar with filters and search options. The main area displays a grid of issue cards. A red starburst graphic is overlaid on the right side of the grid, containing the text "With QR code for each Issue!". The issue cards show details like "DEV-162", "KANBAN-18", "TEST PLEASE IGNORE STORY", and "BACKGROUND". A QR code is visible on each card. The bottom of the interface shows a print button and various settings.

With QR code for each Issue!

If you need to print only one issue, it's possible of course! Search the **"Print QR"** button and that's all!

➤ Troubleshooting (Display Customfields in the layout)

If you need to display in the cards values of customfields instead of the system fields, it's possible!

You need to ask by the ID of the customfield to your Jira Admin.

And follow those pictures to configure it:

- Click in CF1 or CF2 or CF3 buttons and add the "customfield_xxxx" value where "xxxx" is the ID of the customfield
