Support Admin Tools for Jira

by [MrAdd-on](#)® by [TecnoFor](#)

Jira 9 Server & Datacenter

Paid

Automatize some typical admin actions

➤ Description

With this Jira add-on your Jira Administrators will be more happier! This is an extension for your Jira to automatize some typical admin actions, like search for custom field and know the customfield_id, for workflow, for IssueType, to copy/paste and duplicate settings in customfield config, to put fields in multiple screens in the same tab, to hide IssueTypes with 0 tickets in workflow & issuetype schemes migrations... very useful sure! We use it each day! **No configuration is needed; only install it, that's all! Plug'n'play.**

You will be able also to put a banner countdown for maintenance purposes!

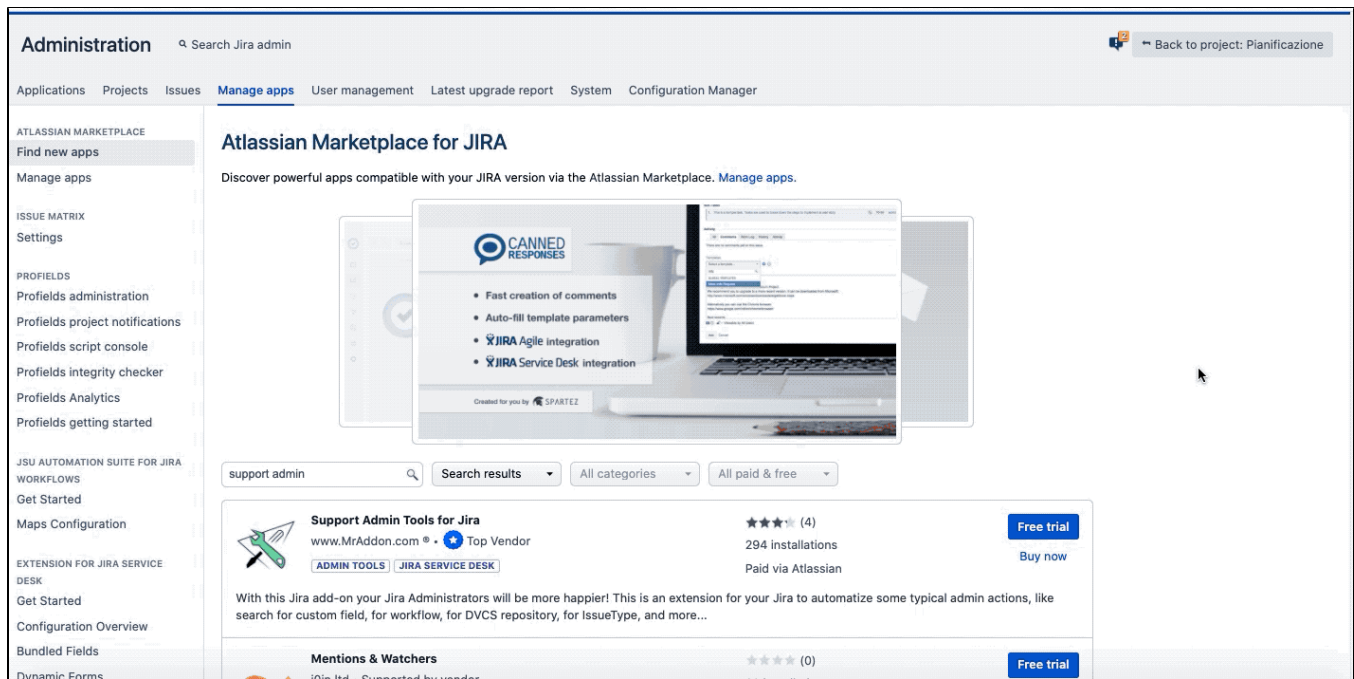

Since february of 2023 [Enlarge Excel Export for Jira](#) features are included in **Support Admin Tools**

Since march of 2023 we can **customize the IssueView Layout** (expanding text-field multiline customfields or Table Grid customfields). You can also expand and collapse the right-panel of the IssueView to enalrge the width of the text-fields or Table-Grid fields

Summary video (2 minutes):

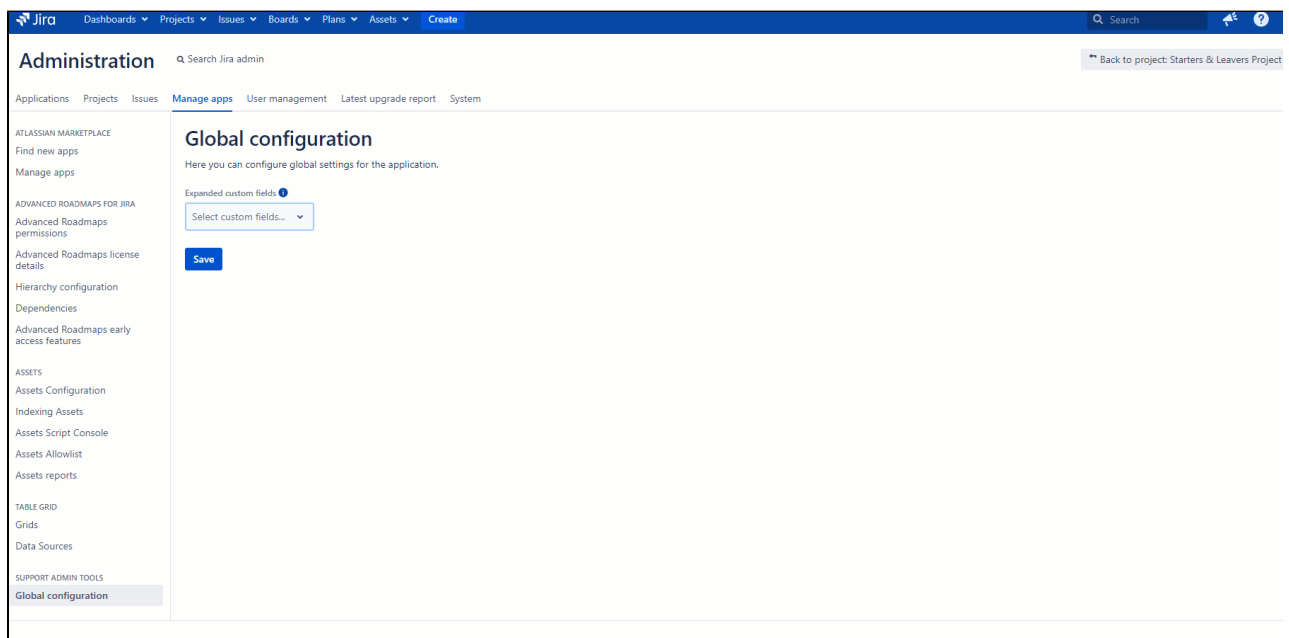

➤ Install addon

After download the JAR, install using the link in **Manage apps** page, search addon as show in following GIF

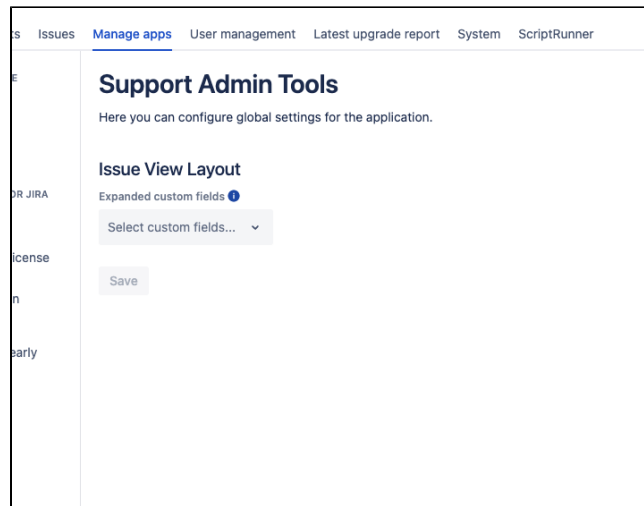

➤ General Configuration (by Jira Admin) IssueView customfield Layout settings

There is an additional functionality in the global configuration, which allows to **expand text field multiline fields** and is also compatible with **Grid type fields** (Included with the **Table Grid** addon). The jira admin can select the fields in this section.

To configure go to the **Global Configuration** page section of the **"Manage Apps"** Admin config and select the fields and click in **"Save"** button

Now take a look to some Issues of the system to see if all works, basically you will see the field expanded in the IssueView Layout.

➤ Issue type

We can search quickly own issue type and reference information we need.

A screenshot of the Jira Administration page, specifically the 'Issue types' section. The page has a blue header with navigation links like 'Dashboards', 'Projects', 'Issues', 'Workload', 'Profields', 'Boards', and a 'Create' button. Below the header, there's a search bar and a 'Back to project: Pianificazione' link. The main content area is titled 'Issue types' and contains a table with columns: Name, Type, Related Schemes, and Actions. The table lists several issue types: 'Activity', 'Bug', 'Business Goal', and 'Business Requirement'. Each row shows the issue type name, its type (Standard), the related schemes (e.g., TESTAG: CRM Issue Type Scheme, DEM: Kanban Issue Type Scheme, etc.), and actions (Edit, Delete, Translate). A sidebar on the left contains navigation links for 'Issue types', 'Issue type schemes', 'Sub-tasks', 'Workflows', 'Workflow schemes', 'Screens', 'Screen schemes', 'Issue type screen schemes', 'Fields', 'Custom fields', 'Field configurations', 'Field configuration schemes', 'Priorities', 'Priority schemes', and 'Issue features'.

View Screens

Add screen JiraSupport [SUAJ]!

A screen is an arrangement of fields that are displayed when the issue is created, edited or transitioned through workflow.

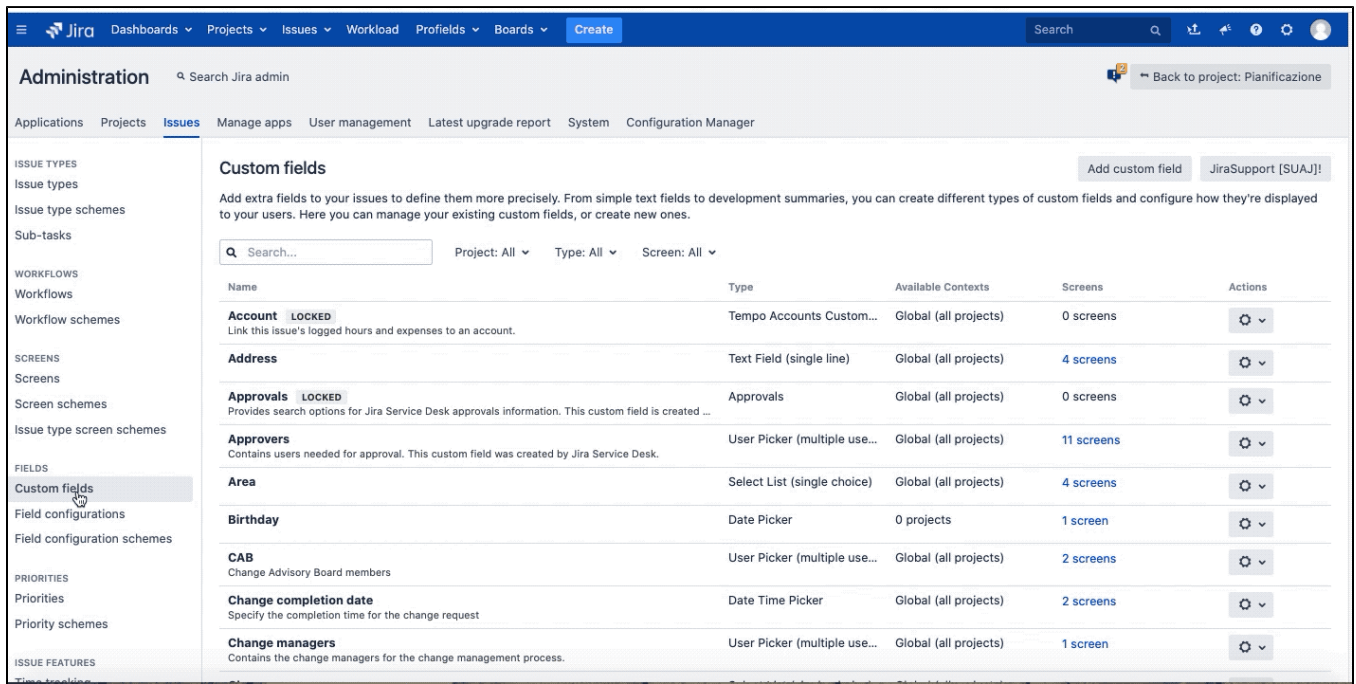

- To choose screens that are displayed when issues are **created** or **edited** please map the screens to issue operations using **Screen Schemes**.
- To select which screen is displayed for a particular **workflow transition**, please select the **workflow** the transition belongs to and edit it.

Note: It is only possible to delete a screen if it is not part of a Screen Scheme and is not used in any workflows.

Name	Screen schemes	Workflows	Actions
AUT: Kanban Bug Screen	• AUT: Kanban Bug Screen Scheme		Configure Edit Copy
AUT: Kanban Default Issue Screen	• AUT: Kanban Default Screen Scheme		Configure Edit Copy
COVID: Jira Service Desk Screen This Jira Service Desk Screen was generated automatically	• COVID: Jira Service Desk Screen Scheme		Configure Edit Copy
CUS: Scrum Bug Screen	• CUS: Scrum Bug Screen Scheme		Configure Edit Copy
CUS: Scrum Default Issue Screen	• CUS: Scrum Default Screen Scheme		Configure Edit Copy
DEM: Kanban Bug Screen	• DEM: Kanban Bug Screen Scheme		Configure Edit Copy
DEM: Kanban Default Issue Screen	• DEM: Kanban Default Screen Scheme		Configure Edit Copy

Fields

In this case, addon adds quick link to each field for quick reference every action.

The screenshot shows the Jira Administration interface, specifically the 'Custom fields' section under 'Issues'. The left sidebar lists various administration categories like Issue Types, Workflows, Screens, and Fields. The main content area is titled 'Custom fields' and includes a search bar and filters for Project, Type, and Screen. Below this is a table listing existing custom fields.

Name	Type	Available Contexts	Screens	Actions
Account <small>LOCKED</small> Link this issue's logged hours and expenses to an account.	Tempo Accounts Custom...	Global (all projects)	0 screens	
Address	Text Field (single line)	Global (all projects)	4 screens	
Approvals <small>LOCKED</small> Provides search options for Jira Service Desk approvals information. This custom field is created ...	Approvals	Global (all projects)	0 screens	
Approvers Contains users needed for approval. This custom field was created by Jira Service Desk.	User Picker (multiple use...	Global (all projects)	11 screens	
Area	Select List (single choice)	Global (all projects)	4 screens	
Birthday	Date Picker	0 projects	1 screen	
CAB Change Advisory Board members	User Picker (multiple use...	Global (all projects)	2 screens	
Change completion date Specify the completion time for the change request	Date Time Picker	Global (all projects)	2 screens	
Change managers Contains the change managers for the change management process.	User Picker (multiple use...	Global (all projects)	1 screen	

➤ Banner

This add-on adds a special feature for Banner. We can set a countdown with few clicks.

The screenshot shows the Jira Administration interface, specifically the 'Edit Announcement Banner' page under 'System'. The left sidebar lists various system support categories like General configuration, System info, and Security. The main content area is titled 'Edit Announcement Banner' and includes a description of the banner feature. Below this is a form with a text area for the announcement and a visibility level selector.

Edit Announcement Banner

You can set HTML text which will display as a banner at the top of all pages in Jira. This is useful for alerting users of upcoming system-wide changes.

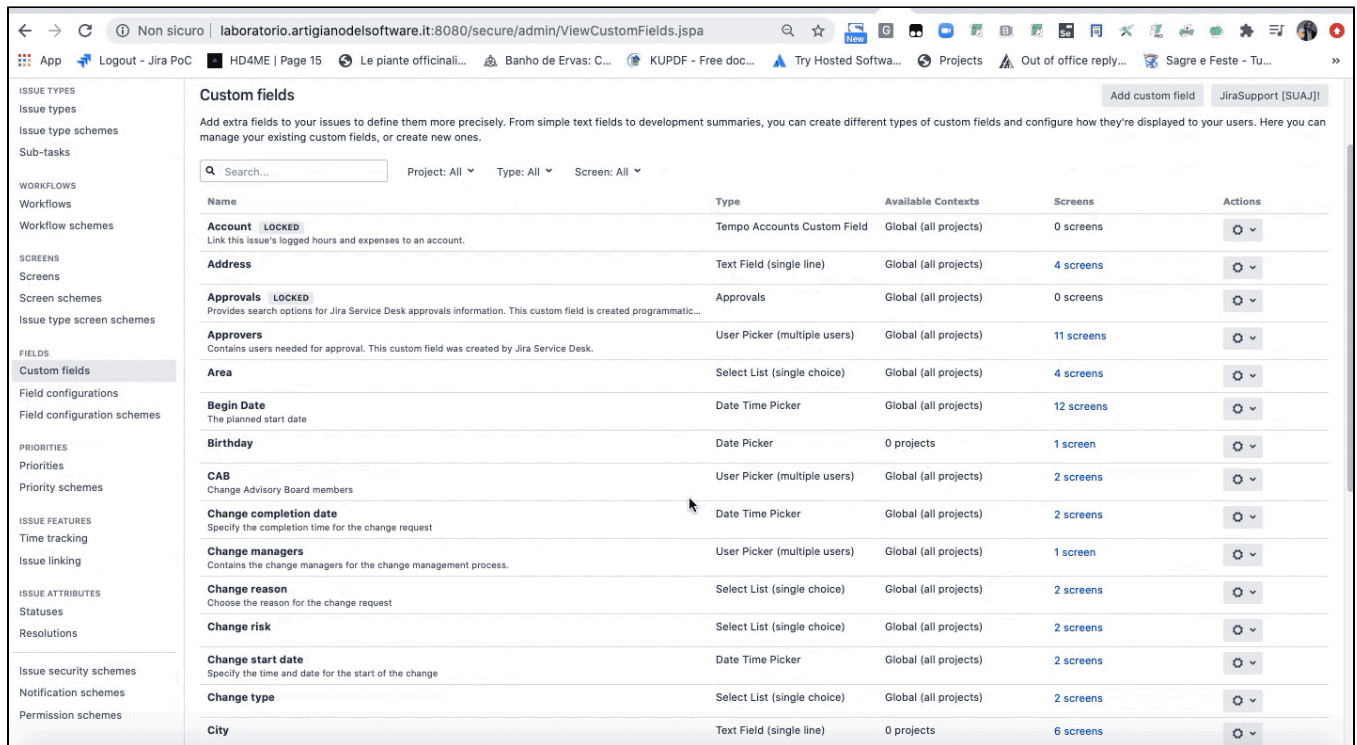

Announcement:

Visibility Level: ☐ Public - Show to anyone ☒ Private - Show to logged in users only

➤ Most important features

Another important feature of this addon is the possibility of copy/paste contexts of Custom Fields. It's very easy. Follow me and I will explain all secrets 😊

This GIF describe how arrive to the right Jira configuration page (New UI experience change all 😊)

As we see, Addon add new functionalities after click the button: **JiraSupport**

- Load Projects
- Load Types
- Save Types Options
- Save Project Options

Once select the new configuration, just Save Type Options and Save Project Options to save (See the previous GIF).

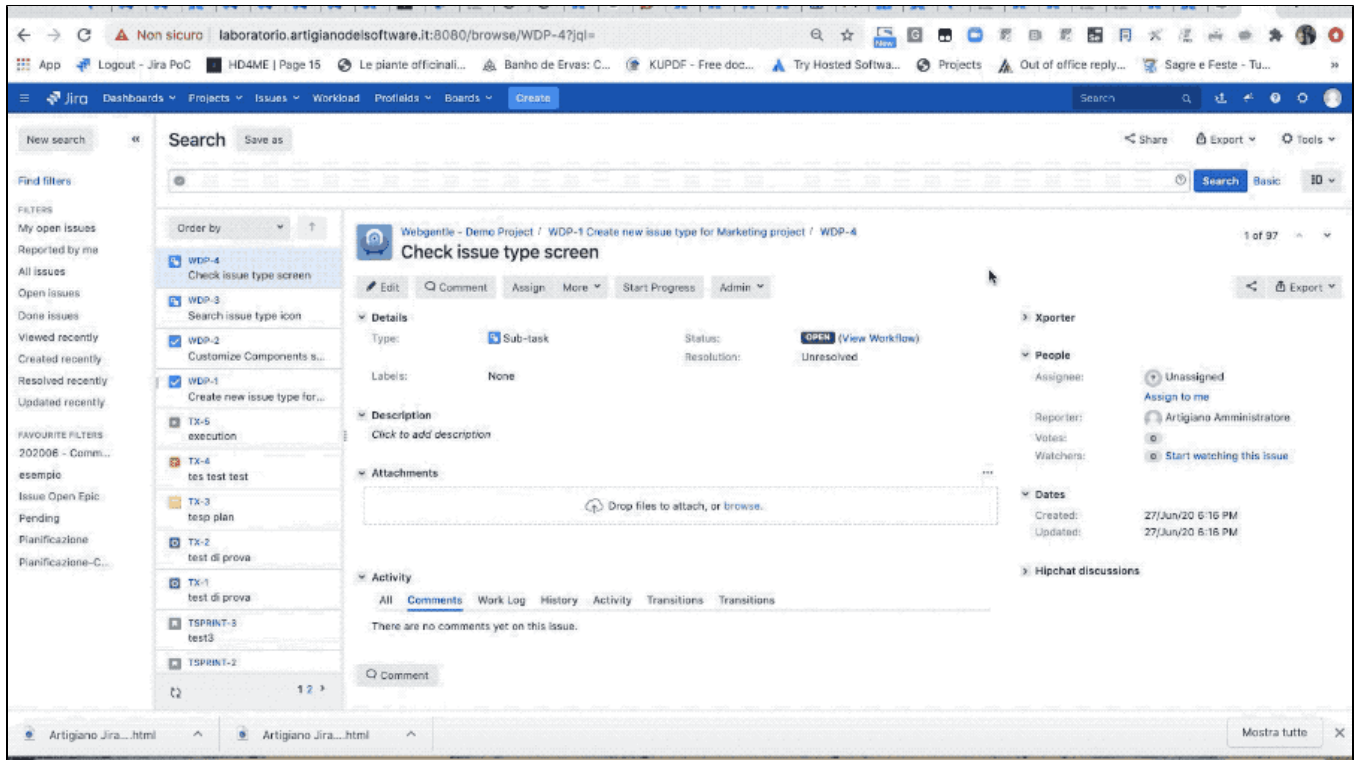

Another great features is a great help for Workflow migration. Let me explain. If you change the Workflow Scheme, out-of-the-box wizard list all issue type, also issue type not used or involved in migration.

The following youtube video describe the result:

Well, using addon we can reduce the list of issue type to only involved in migration. So we can be focused in real work. This is a great result.

➤ Enlarge Your Excel Export feature

Just create a export for more than 10,000 issues as shown in following GIF:

As we see, a new entry is present in Export menu. After select own issues, well we can select this new entry and extract own Excel. Html format can be managed both with browser and Excel.

[illegible]

(*) JIRA can be configured to increase the limit or bypass it altogether.

Here is a brief explanation of each configuration property:

- **jira.search.views.default.max** - This is the maximum value of issues exported by default when exporting/requesting a search result.
- **jira.search.views.max.limit** - This defines the maximum limit for all users, regardless of modifications on the referred URL. (or with the plugin Enlarge Excel Export)
- **jira.search.views.max.unlimited.group** - This property sets up a group that will be able to request an unlimited number of issues on a search result.

You can use these configuration properties to override the default behavior. This is done by editing a file in your JIRA Home Directory, "[jira-config.properties](#)".

1. First, if the `jira-config.properties` file does not exist in your [JIRA Home Directory](#) then create it.
2. Add the override properties to the config file. Example:

```
jira.search.views.default.max=2000
jira.search.views.max.limit=10000
jira.search.views.max.unlimited.group=jira-administrators
```

- a. Restart JIRA.

The example configuration increases the default result limit to 1500 issues. Users can modify URLs to export up to 2000 records. Members of the `jira{{-administrators}}` group can modify URLs to export an unlimited number of records

> Result

A great Addon 😊

Videos and Resources

Here some video about addon. Enjoy.
